

TECHNICIAN FLOW • AUGUST 2026

Job reporting, site to client

Six screens covering the whole journey: the technician's day on the phone, the manager's review in the office, and the branded report that reaches the client.

STEP 01 • DAY VIEW

Your day

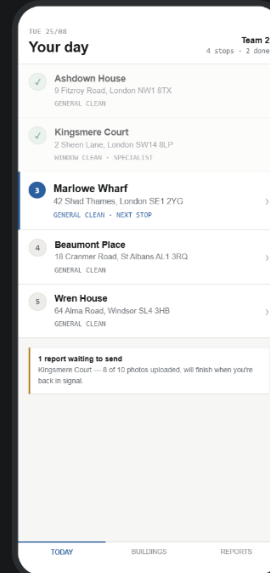

Stops in the order the office set them, with address and service. No arrival times, no re-order handle.

Done stops fade out

The next stop is the only one that carries weight.

Uploads finish in the background

Poor signal never blocks the technician from moving on.

Made with Claude Design

STEP 02 • JOB FILE

Everything to get in and get on

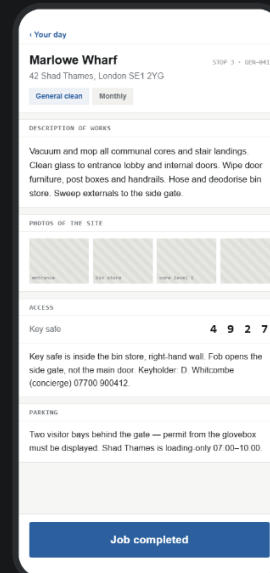

Description of works, site photos, key safe code, keyholder and parking rules. One screen, no digging.

Access code set large

Readable at arm's length, in the rain, on a keypad.

Internal only

Codes and keyholder details are excluded from every client output.

Made with Claude Design

STEP 03 • JOB REPORT

No photo, no completion

Works carried out arrives pre-filled from the job spec and stays editable. Photos sort into before, during and after.

The button stays dead until a photo lands

Stated as a rule, not hidden behind an error message.

Typing is optional

Common issues are one-tap chips: lighting fault, fly-tipping, no access.

Made with Claude Design

STEP 04 • JOB COMPLETED

Handed over, not sent

The report goes to the office. Nothing has reached the client, and the screen says so plainly.

The technician never sees the client output

No PDF, no share link, nothing to forward by mistake.

Straight to the next stop

The only action on the screen keeps the day moving.

STEP 05 • MANAGER REVIEW

The office decides what the client sees

Approve first. Then choose which parts of the report are included, and send to client and accounts as two separate actions.

- Sending is locked until approval
- Status line reports partial sends
"Sent to client · accounts not sent"
- Price and team names are opt-in

STEP 06 • CLIENT REPORT

What the client receives

Address, service, works carried out, issues to flag and before / after photography, under your branding.

Waiting on you

Logo files (reversed and standard), brand hex codes, and the accreditation marks for the footer. The dashed zones are sized and ready.

JOB REPORT
REP-2418 · 25/08/2026

Marlowe Wharf

42 Shad Thames, London SE1 2YG

Prepared for Archerly Estates

SERVICE
General clean

FREQUENCY
Monthly

DATE OF VISIT
25/08/2026

WORKS CARRIED OUT

Vacuum and mop all communal cores and stair landings. Clean glass to entrance lobby and internal doors. Wipe door furniture, post boxes and handrails. Hose and deodorise bin store. Sweep externals to the side gate.

ISSUES TO FLAG

Light out on the level 3 landing — replacement is outside our contract, recommend your maintenance contractor attends.
Two bags of fly-tipped waste by the side gate — left in place, a collection is needed.

DECISIONS BEHIND THE SCREENS

Five rules the design holds to

A job cannot be completed without a photo

Minimum one, sorted into before, during or after.

The description carries over, and stays editable

Pre-filled from the job spec so nothing is retyped on site.

Access codes never leave the office

Key safe codes and keyholder details are excluded from client output.

Day order is set by the office

No re-ordering on the phone, no times displayed.

Client and accounts are sent separately, and the status says which

A partial send is a visible state, not a silent one.

Made with Claude Design X

NEXT

Technician flow is settled. The office tools are the next body of work.

Blocked on

Logo files, brand colours and accreditation marks for the client report header and footer.

To design

Building file, client view, schedule matrix, calendar view — one connected desktop prototype.

Still open

No-access and job-not-done routes, manager queue at volume, empty and offline states.
